          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB seq

T "Characterization of a family of Arabidopsis genes related to

T xyloglucan fucosyltransferasel.";

Plant Physiol. 127:1595-1606(2001).

-! FUNCTION: May be involved in cell wall biosynthesis. May

act as a fucosyltransferase.

C act as a fucosyltransferase.

C -!- PATHWAY: Glycosylation.

C -!- SINGILDULAR LOCATION: Type II membrane protein. Membrane-

form in trans cisternae of Golgi (By similarity).

-!- TISSUE SPECIFICITY: Expressed in roots and flowers.

-!- SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 37.

FUNCTION: May be involved in cell wall blosymum.

act as a fucosyltransferase.

PATHWAY: Glycosylation.

SUBCELLULAR LOCATION: Type II membrane protein. Membrane-bound form in trans cisternae of Golgi (By similarity).

form in trans cisternae of golgi (By similarity).

"Characterization of a family of Arabidopsis genes related to xyloglucan fucosyltransferasel.";

Plant Physiol. 127:1595-1606(2001).

-! FUNCTION: May be involved in cell wall biosynthesis. May act as a fucosyltransferase.

-! PATHWAY: Glycosyltation.

-! SUBCELLULAR LOCATION: Type II membrane protein. Membrane-bound form in trans cisternae of Golgi (By similarity).

-! TISSUE SPECIFICITY: Expressed in leaves and stems.

-! SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 37.
                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EUNCYLOW: not read to a fucosyltransferase.

PATHWAY: Glycosylation.

SUBCELULAR LOCATION: Type II membrane protein. Membrane-bound form in trans cisternae of Golgi (By similarity).

form opportentity: Expressed in roots, stems, leaves, flowers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          U
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Siliques and seedlings.
